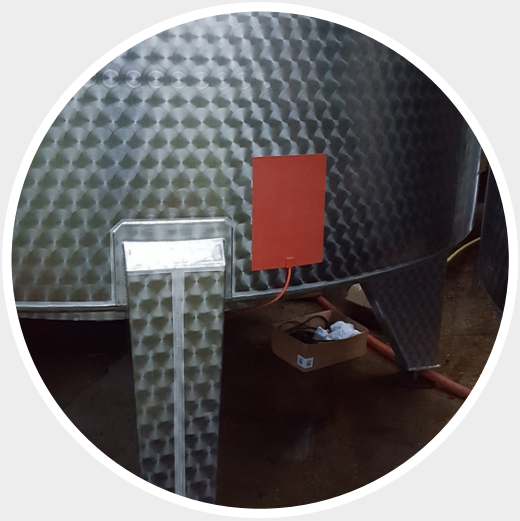
THERMO-PATCH

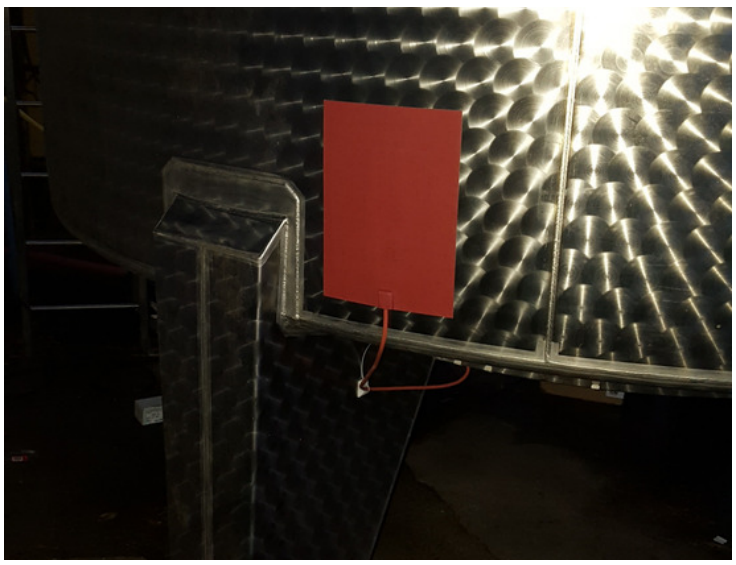
TANK HEATING SYSTEM



INCREASE EASILY THE TEMPERATURE OF YOUR VATS

The tank heating is often complicated to implement, or very expensive. With THERMO-PATCH™, increase the temperature of your tanks without changing their structure.

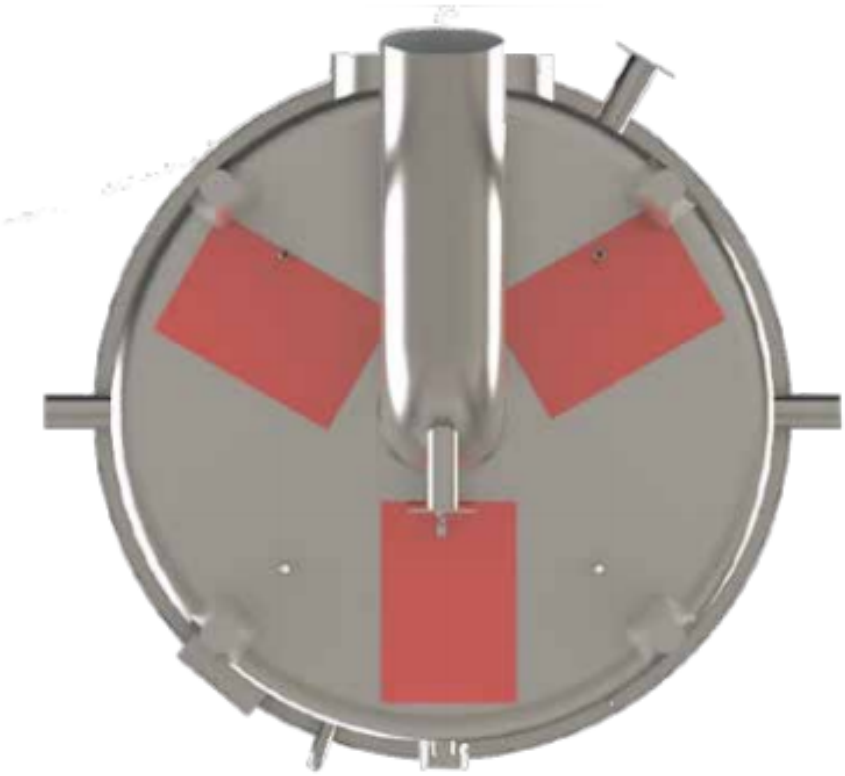
EFFECTIVE	ADJUSTABLE	NO RISK	EASY MAINTENANCE
SURFACE HEATING POSITIONED AT THE LOW PART OF THE TANK 220 V	ADAPTED TO STAINLESS TANK, ADJUSTABLE POWER	NO PRODUCT CONTACT, AVOIDING OVERHEATING	NO NEED TO CLEAN, NO MAINTENANCE, TIME SAVING



FIXING	NO TOUCH	ADAPTABLE
THERMO-PATCH™ is an electric heating system **to be fixed on the outside of the tank**, unlike the heating resistance directly immersed in the wine. **Grip problems are eliminated, and the exchange surface is 50 times greater than heating resistance**. The power is indeed adapted to the volume of the tank.	Located in the lower part, the THERMO-PATCH ™ heating system is external to the tank, thus, there is **no contact with the product**. It **avoids the risk of overheating and caramelization**. The entire bottom of the tank becomes the heating zone. Thanks to this large surface, **a high power is transmitted to the liquid**.	The THERMO-PATCH ™ heating system is modular. It is therefore **very easy to adapt the heating power to the volume of the tank**. The bottom position allows **heating the entire product regardless of the height of the tank**.

Once installed, our patches are not repositionable

FOR A 40HL TANK WITH 4 PATCHES, INCREASE BY 10 °C/ 50°F THE TEMPERATURE OF YOUR TANK IN 24 HOURS.



Our patch should not be poisitioned at the bottom end of the vat in case of lees aging.
